

## Dry Peas and Lentils

### *Prospects for a Small Dry Pea Crop Push Prices Higher*

Dry pea harvested area is estimated to fall 44 percent in 2011 to 398,800 acres. Cool spring weather in the Pacific Northwest that delayed crop development and spring rains in North Central States that delayed planting are expected to hold down yields. Given the combination of smaller area and below-trend yields, dry pea production could be the lowest since 2003. Lentil harvested area is also expected down to 455,000 acres, 28 percent below 2010, but 12 percent above 2009. Even with lower yields, 2011 lentil production could still be the third largest U.S. crop ever—behind the records set in the last 2 years. The first estimate of 2010 dry-pea and lentil production will be released in the November 9 *Crop Production* report.

So far this marketing year (July-September), grower prices for dry peas and lentils are above those of a year earlier. Reflecting the anticipated small size of the 2011 crop, the all dry-pea grower price has risen since July to a preliminary \$15.40 per hundredweight (cwt) in September, substantially higher than \$8.63 per-cwt average for the same month in 2009 and 2010 when large production was weighing on prices. The U.S. lentil price in September was an average 17 percent above the levels seen 1 and 2 years earlier. Large carryover stocks—1.7 million cwt on June 1—will likely limit the rise in lentil prices this marketing year.

The season-average grower price for the 2010 dry-pea crop was \$9.77 per cwt, 9 percent above a year earlier when production reached a record 17.1 million cwt. In contrast, season-average lentil prices in 2010/11 were down from a year earlier to \$25.70 per cwt, reflecting record 2010 production of 5.9 million cwt. In both cases, grower prices remained well above established loan rates for these crops.

## Exports Present Mixed Picture During July and August

During the first 2 months of the 2011/12 marketing year (July-August), combined dry pea and lentil export volume (excluding seed) continued a decline begun in 2010/11 (after peaking at a record high of 16.96 million cwt in 2009/10). India remained the leading export market in July and August—accounting for 22 percent of the volume shipped, down from a 57-percent share a year earlier. The 80-percent decline in Indian purchases accounted for 94 percent of the 1.47 million cwt drop in U.S. dry pea and lentil exports (excluding seed). However, last summer's strong exports reflect the availability of high-quality U.S. peas and lentils at relatively cheap prices, and India is a price-sensitive buyer. Kenya (18 percent of total exports), Spain (7 percent share), Pakistan (6 percent share) and Canada (5 percent share) rounded out the top five destinations. With higher prices expected this marketing year, commercial exports of dry peas and lentils could be down, particularly to the Indian subcontinent. However, food aid shipments could offset some of the decline.

With ample supplies available, lentils were a bright spot in the export picture during July and August. Spain returned as the top market for U.S. lentils, after dropping to fourth place a year earlier behind India, Peru, and Columbia. Since 2000, Spain has accounted for over a quarter of lentil shipments during July and August. Peru, India, and Columbia have been consistent buyers during those 2 months since 2007, receiving a combined 10-percent average share. As the major market for U.S. Austria winter peas, Taiwan purchased a record 8,860 cwt in July and August. Exports of planting seed rebounded from the low levels of the last two summers, mainly due to larger shipments of lentil and chickpea seed.

-- = not available.

1/ These prices differ from table 1 as they represent a national average rather than a specific shipping area. They also are representative of an average for all uses and all grades, food and nonfood. 2/ The crop year for chickpeas begins in September.

\* = Posted national price. Note: Rgnl = regional. The weekly loan deficiency payment rate is calculated as the loan rate less the posted price.

1/ Applies to smooth green and yellow, wrinkled, winter (includes Austrian), miscellaneous (including marrowfat peas), and mixed dry peas. U.S. loan rate = \$5.40.

2/ Applies to all lentil varieties. U.S. ave loan rate = \$11.28. 3/ Applies to desi and small-sieve kabuli chickpeas that fall through a 20/64 inch grading screen.

-- = not available. f = ERS forecast.

1/ These prices differ from table 1 as they represent a national average rather than a specific shipping area. They also are representative of an average for all uses and all grades, food and nonfood. 2/ The marketing year for chickpeas begins in September. 3/ Publication of monthly marketing percentages for dry peas, chickpeas, and lentils began in 2003/04.
