Subject of Review: In this report, we describe a range of plausible diets and global demand for calories to 2050, across scenarios with increasing population and increasing incomes. Higher incomes generally lead to greater consumption of animal products, which require more crop calories as feed than food calories consumed, hence crop production increases more than food consumption.

Purpose of Review: The purpose of the review is to ensure the high-quality of the economic analysis, transparent explanation of methods, objective interpretation of results, and effective communication to the intended audience.
