## 1. Introduction

This codebook provides details on the Food-away-from-Home (FAFH) nutrients for each FAFH item in the Food Acquisition and Purchase Survey. Users should first read *User's Guide to Survey Design, Data Collection, and Overview of Datasets* for information about the survey design and sample, survey instruments and data collection, and analytic notes. Event-level variables are provided in the **faps\_fafhevent** dataset and described in the *FAFH Event* codebook. The main item-level data are provided in the **faps\_fafhitem** and described in the *FAFH item* codebook.

A number of different nutrient databases were matched to the food items in FoodAPS, and the process was complex. The *FoodAPS Nutrient Coding Overview* describes these databases and how they were used to provide nutrient values for food items in FoodAPS. This codebook provides summaries for each of the variables included in the **faps\_fafhnutrients** dataset.

## 2. Data Contents

The **faps\_fafhnutrients** data file contains one record per FAFH item acquired at each event. There are a total of 116,074 items, from 37,407 events and 4,305 households.

Variables are grouped into four main types:

- Identifying variables
- Item amount information
- Food Pattern Equivalents (FPE) variables, reported as the amount per 100 grams
- Caloric and macro-/micronutrient content variables, reported as the amount per 100 grams.

See *FoodAPS Nutrient Coding Overview* for a description of how the nutrient and FPE values were assigned to each item.
