Subject of Review:

This paper presents a new approach to estimating the relationship between food exposures and foodborne illness in the U.S. It complements similar efforts by other federal agencies. We conduct cross-sectional time series analysis of daily data on disease and on food purchases for home consumption across the U.S. Foodborne Campylobacter infections are widely thought to be a chicken problem and their marked seasonality primarily driven by temperature.

Purpose of Review:

The purpose of the review is to ensure the high-quality of the economic analysis, transparent explanation of methods, objective interpretation of results, and effective communication to the intended audience.
