SHARE RENTING WORKSHEET **(Section A)**

This supplement is to help compute the landlord's share of crop for operators with multiple landlords. For each crop grown or rented from others for shares-----

1) Group each crop together. For example, group all the land rented from others for shares for corn
2) Record the acres rented, the yield, the production and the arranged share to the landlord
3) Multiply the percent share and total production, then divide by 100, this will give the landlord's share
4) Once all landlord shares for that crop are computed, sum all landlord shares and record that in the questionnaire.

1 CROP	2 ACRES RENTED	3 YIELD	4 TOTAL PRODUCTION (*COL 2* * *COL 3*)	5 LANDLORD SHARE PERCENT	6 LANDLORD SHARE (*COL. 4 * COL. 5*)/100 BUSHELS or CWT.
