## U.S. Sugar September 2011

On September 12, 2011, the USDA released its latest U.S. and Mexico sugar supply and use estimates for fiscal year (FY) 2011 and projections for FY 2012 in the World Agricultural Supply and Demand Estimates (WASDE) report. For FY 2011, the USDA increased its estimate of tariff-rate quota (TRQ) shortfall and accounted for early entry of imports from the FY 2012 raw sugar TRQ and deferral of some FY 2011 raw sugar TRQ imports until the first month of the next fiscal year. For FY 2012, the USDA reduced its projection of beet sugar production to 4.575 million short tons, raw value (STRV), a reduction of $175,000 \mathrm{STRV}$, or 3.7 percent, compared with last month's projection. The reduction was made in response to lower sugarbeet production forecasts by the National Agricultural Statistics Service (NASS). NASS forecast sugarbeet production at 29.180 million tons, a reduction of 1.213 million tons, or 4.0 percent compared with last month's forecast. NASS cited wet field conditions, along with disease and hail damage, in half of the sugarbeet growing areas as reasons for reduced production prospects. No change was made to the FY 2012 cane sugar production forecast. Trade and total use projections remained the same as last month's as well. Ending stocks projected for FY 2012 are decreased 215,000 STRV (lower beet sugar production combined with fewer beginning stocks) to 1.127 million STRV. The implied stocks-to-use ratio is 9.8 percent, a drop of 1.9 percentage points from last month. Supply and use estimates and forecasts in Mexico remained the same as those for last month.

## Sugar in the North American Free Trade Agreement Area (NAFTA)

On September 12, 2011, USDA's National Agricultural Statistics Service (NASS) published forecasts for area harvested, crop yields, and production forecasts for both sugarbeets and sugarcane. Also on September 12, 2011, the USDA released its latest U.S. and Mexico sugar supply and use estimates for fiscal year (FY) 2011 and projections for FY 2012 in the World Agricultural Supply and Demand Estimates (WASDE) report.

## Beet Sugar Production

The USDA reduced its projection of FY 2012 beet sugar production to 4.575 million short tons, raw value (STRV), a reduction of 175,000 STRV, or 3.7 percent compared with last month's projection. In the September 2011 Crop Report, NASS projected national sugarbeet production at 29.180 million tons, a reduction of 1.213 million tons, or 4.0 percent, compared with last month's forecast. NASS cited wet field conditions, along with disease and hail damage, in half of the sugarbeet growing areas as reasons for reduced production prospects.

National sugarbeet yield is forecast at 24.2 tons per acre. Although this yield forecast is close to the average national yield since 2001/01 of 24.1 tons per acre, it is far below yields since 2006/07. Figure 1 shows national sugarbeet yields since 2000/01. Better seed varieties, designed to minimize disease and pest losses, were responsible for enhanced yields starting in 2006/07. Annual yields since 2006/07 have averaged 26.4 tons per acre, compared with 22.1 tons for 2000/01-2005/06. Yields in the latter period were not only larger but also about 49 percent less variable. ${ }^{1}$ These factors highlight the degree to which the 2011/12 forecast yield deviates from recent trends. If the forecast yield of 24.2 tons for 2011/12 is realized, it would be about 1.6 standard deviations below the calculated mean for the period since 2006/07. This would be the largest deviation from average for the entire period since 2000/01.

Most of the sugarbeet production reduction was centered in the Red River Valley producing States of Minnesota and North Dakota (fig. 2). Production there is forecast at 14.553 million tons, about 7.2 percent less than last month's forecast and 16.4 percent less than last year's production of 17.402 million tons. Although area for harvest in the Red River Valley is forecast to increase 38,000 acres over last year to 693,000 acres, yield is forecast at only 21.0 tons per acre, about 21 percent less than last year's record yield of 26.6 tons per acre. Poor growing conditions for the entire season have hampered plant development and will cause the harvest season to begin later than originally expected. A late start increases the likelihood of hard freezes before the crop is fully harvested.

## Cane Sugar Production

The FY 2012 cane sugar forecast is 3.360 million STRV, the same as last month. This is 212,000 STRV more than last year and basically attributable to a return to a normal crop in Florida. NASS lowered its forecast of total sugarcane area harvested by 6,000 acres ( 8,000 fewer acres in Florida partially offset by 2,000 acres more in Texas), but increased its yield forecast from 32.3 tons last month to 32.4 tons per acre (an increase in Florida to 35.0 tons per acre, but a drop in Texas to 33.7 tons per acre).

## Trade

On August 26, 2011, the USDA announced that sugar entering the United States under the FY 2011 raw sugar import tariff-rate quota (TRQ) will be permitted to enter U.S. Customs territory until October 31, 2011, a month later than the usual last entry date. The USDA previously announced on August 1, 2011 that sugar entering under the FY 2012 raw sugar TRQ will be permitted to enter U.S. Customs territory beginning September 1, 2011, a month earlier than the usual first entry date of October 1. These announcements do not change the level of any U.S. sugar import TRQs and apply only to raw cane sugar (not refined sugar).

(2011/12 projected as of Sept. 2011)

Figure 2
U.S. sugarbeet production, estimated 2010/11, projected 2011/12 by USDA, August and September 2011

Source: USDA, NASS, Crop report.

Raw sugar TRQ imports for FY 2011 are estimated at 1.585 million STRV. Early imports from the FY 2012 raw sugar TRQ in the amount of 38,193 STRV are forecast to be offset by raw sugar imports from the FY 2011 raw sugar TRQ entering in October 2011. Also, the USDA revised its estimate of raw sugar TRQ shortfall from 65,000 STRV in August to 87,000 STRV in September.

Table 1 shows all the components of U.S. sugar imports for FY 2011. Total imports are estimated at 3.786 million STRV, including 1.624 million STRV from Mexico.

FY 2012 sugar TRQ imports are forecast at 1.384 million STRV. Table 2 shows the component details. The FY 2012 raw sugar TRQ was set at 1.231 million STRV, the minimum to which the United States is committed under the World Trade Organization (WTO) Uruguay Round Agreement on Agriculture. The raw sugar TRQ shortfall is projected at 115,071 STRV. As explained earlier, imports from the FY 2011 raw sugar TRQ entering in October are projected to be offset by imports from the FY 2012 raw sugar TRQ entering in September 2011. The FY 2012 refined sugar TRQ was established at 124,251 . This includes the WTO minimum access quantity of 24,251 STRV and an additional 100,000 STRV of organic sugar above the minimum.

Total imports for FY 2012 are projected at 2.962 million STRV, including 1.218 million STRV from Mexico.

## Sugar Use and Stocks

Sugar deliveries for human consumption are unchanged from last month: 11.0 million STRV for FY 2011 and 11.125 million STRV for FY 2012. Also unchanged are sugar exports: 250,000 STRV for FY 2011 and 200,000 STRV for FY 2012; and other deliveries (re-export sugar for sugar-containing products, sugar for polyhydric alcohol, and sugar for livestock feed): 235,000 STRV for FY 2011 and 190,000 STRV for FY 2012.

The net effect of all current-year changes is to decrease FY 2011 ending year stocks by over 40,000 STRV to 1.745 million STRV, implying an ending year stocks-to-use ratio of 15.2 percent. Ending stocks projected for FY 2012 are decreased 215,000 STRV (lower beet sugar production combined with fewer beginning stocks) to 1.127 million STRV. The implied stocks-to-use ratio is 9.8 percent, a drop of 1.9 percentage points from last month.

## Direct Consumption Imports

Figure 3 shows the growth in sugar deliveries for human consumption since FY 2003. While there has been some growth in deliveries from domestic beet sugar processors and cane sugar refiners, most growth has resulted from direct consumption sugar imports. In the early part of the period, these imports constituted a very small proportion of total deliveries. In FY 2006, increased direct consumption imports jumped to 6 percent of the total because domestic supply disturbances (lower than expected cane and beet sugar production) dictated greater imports. The sustained growth of direct consumption imports started in 2008 with the full implementation of the North American Free Trade Agreement (NAFTA) provisions covering sweetener trade between the United States and Mexico. Direct consumption imports constituted about 7.5 percent of total deliveries for FY 2009 and FY 2010 and are estimated above 8 percent ( 890,000 STRV) for FY 2011.

## Prices

U.S. sugar prices have remained higher than historical levels. From January 2011 through the end of August, raw sugar prices (nearby Intercontinental Exchange (ICE) futures contract no. 16) averaged 38.11 cents per pound. The average for August, at 40.16 cents per pound, was more than 2 cents above the 7 -month average. The margin between the U.S. raw sugar price and the world raw sugar price (ICE futures contract no. 11) averaged 11.29 cents in August, up from 8.46 cents in July. The average for September through the 12th is up to 12.35 cents.
The beet sugar price (low end of Midwest range from the Milling and Baking News) averaged 55.40 cents per pound the first 7 months of 2011 and averaged 57.00 cents per pound in August.

Table 1--USDA estimate of sugar imports in FY 2011

## Sugar in Imported Products

Table 3 shows an estimate of sugar contained in imported food and beverage products for the first 10 months of the fiscal year (October-July) since FY 2000. Year-over-year growth averaged 83,250 tons from FY 2001 through FY 2006 to reach 1.035 million tons of sugar in FY 2006 (first 10 months). Sugar in products fell in each of the subsequent 3 years and was estimated at 905,435 tons in FY 2009. Overall growth has resumed, and the FY 2011 estimate is 1.014 million tons, fairly close to the level in FY 2006. Nonetheless, the growth since FY 2006 has been uneven. Sugar in imported sugar confectionery is only 78 percent of its FY 2006 level, while sugar in cocoa and cocoa products is 22 percent higher and sugar in bread, pastries, and cakes is 25 percent higher than in FY 2006. Whereas sugar in sugar confectionery products constituted 40 percent of the total in FY 2006, the share has dropped to 32 percent in FY 2011. For the same period, sugar's share in cocoa and cocoa products has increased from 21 to 26 percent and from 11 to 15 percent for the bread, pastry, and cake category.

## Sugar in Mexico

The USDA made no changes to the Mexico sugar supply and use for either 2010/11 or 2011/12. The 2010/11 export estimate is 1.482 million metric tons, raw value (MTRV) and is based on the pace of exports through August. Ending stocks for 2010/11 are estimated at 778,000 MTRV, implying an ending stocks-to-consumption ratio of 18.2 percent, less than the 22 percent often cited as the optimal ratio to meet consumption needs until the start of the next year's sugarcane harvest.

The 2011/12 export forecast is 1.113 million MTRV and is calculated residually by assuming 2011/12 sugar ending stocks will equal 22 percent of domestic sugar consumption. Although many commentators have been pessimistic about 2011/12 production prospects (most predict substantially less production than in 2010/11), the USDA did not change its production forecast of 5.650 million MTRV ( 5.330 million tonnes, tel quel). The USDA notes that rainfall from January 1 through early September in the primary growing area of Veracruz is recorded at 890 millimeters, or 14.3 percent higher than the 1983-2010 average for the corresponding time period. In the western areas of the Mexican corn belt, rainfall through early September is recorded at 407 millimeters, or 5.4 percent above the 19832010 average for the period. Reservoir levels in all regions except the northwest (where little sugarcane is grown)

Table 3--Sugar in imported products, first 10 months of fiscal year, October-July

| Fiscal year (Oct-Sept) | Sugar confectionery | Cocoa and cocoa preparations | Cereal and bakers preparations | Bread, pastry, cakes, etc. | Misc. edible preparations | Carbonated soft drinks | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | ------- | hort tons ---- |  |  |  |
| 2000 | 187,333 | 106,072 | 16,786 | 77,474 | 103,158 | 45,174 | 535,996 |

| 2011 | 326,701 | 262,876 | 14,584 | 147,588 | 155,570 | 106,896 | 1,014,215 |

Source: USDA, ERS, Sugar and Sweetener Team - calculations on U.S. Census import data.
are at levels close to those of a year earlier. The Comite Nacional Para El Desarrollo Sustentable de la Cana de Azucar (CNDSCA) has not announced its forecast yet.

Sugar prices have leveled off after having increased during the months of July and August. Refined sugar in Mexico City averaged 571 pesos per 50-kilgram bag during the first half of 2011 and increased to 603 pesos in July and 661 pesos in August. The price at the beginning of September is quoted at 658 pesos. For estandar sugar, the first-half average was 517 pesos per 50 -kilogram bag. The average price increased to 560 pesos in July and 625 pesos in August. The price at the beginning of September is 614 pesos.

## U.S. Sugar Exports in the WASDE

The Interagency Commodity Estimates Committee (ICEC) for sugar has been considering a change in the sourcing of U.S. sugar exports for the World Agricultural Supply and Demand Estimates (WASDE). The current series is based on exports reported by the Farm Service Agency (FSA) in its Sweetener Market Data (SMD) database. This series is based on survey data collected by FSA from U.S. sugarbeet processors, sugarcane processors, and cane sugar refiners. These entities are required by law to report to the FSA a range of supply and use data for administration of the U.S. sugar program. Most, if not all, of the reported exports take place as part of the Refined Sugar Re-Export Program. This program allows raw sugar to be imported at world price levels, with the requirement that a corresponding quantity later be re-exported as refined sugar within a set time frame. The SMD data have constituted the historical time series of exports reported in the WASDE, and also have been the basis for the current and 1 -year-ahead WASDE forecasts for U.S. sugar exports.

The ICEC is considering whether to change reporting and forecasting from the SMD-base to a broader range of sugar exports reported by the U.S. Census Bureau in its Foreign Trade reporting system. ${ }^{2}$ Sugar exports made by entities beyond those required to report to the FSA would be captured and be more representative of actual sugar supply and use. Another advantage would be the capability to report on destinations of sugar exports, not currently possible with the SMD-based system.

Within the sugar community, there is interest in tracking U.S. sugar exports to Mexico and perhaps other destinations that take place under the Refined Sugar Re-Export Program. Exporters licensed under that program are required to report export volumes and destinations to the Foreign Agricultural Service (FAS) for the issuance of export credits. The ICEC is considering publishing these data for total exports under the program, and for those program exports going specifically to Mexico.

Table 4 is a draft version of the WASDE-based U.S. sugar supply and use table that incorporates the changes in export data sourcing. ${ }^{3}$ This table includes only historical data through FY 2010 - it excludes FY 2011 and FY 2012 because data for these fiscal years are still incomplete. Forecasting for the current and upcoming years may be considered once discrepancies in historic data are resolved. Exports are listed as the first set of items after "Total Supply." The first two lines with the headings "Total exports" and "Total exports to Mexico" list export data sourced from the U.S. Census Bureau. The next two lines "Reported credits to re-export program, Mexico" and "Reported credits to re-export program, total" list program data from FAS since FY 2006.

Figure 4 compares total U.S. exports reported by the U.S. Census Bureau with exports reported in Sweetener Market Data. There is a rough tracking between the two series. One might expect, at least theoretically, that Census exports would be equal to or greater than SMD exports because of the possibility of exports made by entities that do not report to the FSA. This would not seem to be the case for the fiscal years before FY 2006. Possible sources of discrepancies are differing months in which exports are recorded or the possibility that exports intended by processors were later diverted to other uses after leaving the processors.

The ICEC has not formally made the decision to change the sourcing of the export data. Table 5 shows a problem that has surfaced for FY 2011. The table shows the monthly FY 2011 data through May: U.S. sugar export data reported by the U.S. Census Bureau; Mexican imports of U.S. sugar reported by the Economia Secretariat, Government of Mexico; and U.S. sugar to Mexico reported for export credit reported by FAS. There is a close correspondence between data reported by Economia and FAS, but the Census-based monthly export data averages nearly twice as much as the other sourced data. The ICEC has decided against making the proposed export sourcing change until this discrepancy can be explained and then resolved.

[^1]Table 4-- Proposed U.S. sugar supply and use, by fiscal year (October-September), sugar exports from the U.S. Census Bureau, 9/15/11

1/ Stocks in hands of primary distributors and CCC. 2/ Historical data are from FSA, Sweetener Market Data (SMD).
3/ Actual arrivals under the tariff-rate quota (TRQ) with late entries, early entries, and (TRQ) overfills
assigned to the fiscal year in which they actually arrived.
4/ Starting in 2007/08, total includes imports under Mexico's WTO TRQ allocation for raw and refined sugar.
5/ Source: U.S. Census. 6/ Source: Foreign Agricultural Service. 7/ Calculated as a residual.
8/ For FY 2008-09, combines SMD deliveries for domestic human use, SMD miscellaneous uses, and the difference between SMD imports and World Agricultural
Supply and Demand Estimates.

## Contacts and Links

## Contact Information

Stephen Haley, (202) 694-5247, shaley@ers.usda.gov (coordinator)
Mae Dean Johnson (202) 694-5245, maedean@ers.usda.gov (web publishing)

## Subscription Information

Subscribe to ERS' e-mail notification service at http://www.ers.usda.gov/updates/ to receive timely notification of newsletter availability. Printed copies can be purchased from the USDA Order Desk by calling 1-800-363-2068 (specify the issue number).

## Data

Tables from the Sugar and Sweeteners Yearbook are available in the Sugar and Sweeteners Briefing Room at http://www.ers.usda.gov/briefing/sugar/. They contain the latest data and historical information on the production, use, prices, imports, and exports of sugar and sweeteners.

## E-mail Notification

Readers of ERS outlook reports have two ways they can receive an e-mail notice about release of reports and associated data.

- Receive timely notification (soon after the report is posted on the web) via USDA's Economics, Statistics and Market Information System (which is housed at Cornell University's Mann Library). Go to http://usda.mannlib.cornell.edu/MannUsda/aboutEmailService.do and follow the instructions to receive e-mail notices about ERS, Agricultural Marketing Service, National Agricultural Statistics Service, and World Agricultural Outlook Board products.
- Receive weekly notification (on Friday afternoon) via the ERS website. Go to http://www.ers.usda.gov/Updates/ and follow the instructions to receive notices about ERS outlook reports, Amber Waves magazine, and other reports and data products on specific topics. ERS also offers RSS (really simple syndication) feeds for all ERS products. Go to http://www.ers.usda.gov/rss/ to get started.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and, where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braile, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

[^0]:    ${ }^{1}$ The coefficient of variation (the standard deviation divided by the average) for the first 6-years is 0.0598 (1.32 divided by 22.1 tons) and 0.0307 ( 0.81 divided by 26.4 tons) for the next 5 years through 2010/11.

[^1]:    ${ }^{2}$ The WASDE already bases its import reporting on data from either the U.S. Census Bureau or the U.S. Customs Service and not Sweetener Market Data.
    ${ }^{3}$ This tables closely resembles Table24a at www.ers.usda.gov/briefing/sugar/data.htm/.
