Situation and Outlook

RCS-17J

Oct. 16, 2017

Rice Chart Gallery will be updated on Oct. 18, 2017.

The next release is Nov. 14, 2017.

Approved by the World Agricultural Outlook Board.

Rice Outlook

Nathan Childs nchilds@ers.usda.gov and Sharon Raszap Skorbiansky

sharon.raszap@ers.usda.gov

Global Ending Rice Stocks in 2017/18 Projected Highest Since 2000/01

Rice production forecasts for 2017/18 for Nigeria and Egypt were raised this month, while production forecasts for Brazil, Bangladesh, and the United States were lowered. The 2017/18 global consumption forecast was raised slightly, mostly due to a larger forecast for Nigeria. Revisions in China's stocks and use estimates from 2010/ to 2017/18 resulted in a 15-percent increase in the 2017/18 global ending stocks forecast to 141.5 million tons, the largest since 2000/01, with China accounting for 65 percent of the total. Burma's 2018 export forecast was raised while Brazil's was lowered. Import forecasts for 2018 for Bangladesh and Nigeria were raised this month. Thailand's and Vietnam's trading prices declined slightly over the past month while U.S. export prices continued to rise.

There were only minor revisions to the U.S. 2017/18 rice supply-and-use balance sheet this month. The only supply-side revision was a 1.1-million hundredweight (cwt) decrease in the U.S. production forecast to 178.6 million cwt, 20 percent below a year earlier. Both exports and domestic use remain forecast well below a year earlier. The U.S. ending stocks forecast for 2017/18 was lowered 4 percent to 27.8 million tons, nearly 40 percent below a year earlier. Season-average farm prices are expected to be above a year earlier for both classes of rice and in both regions, mostly due to an expected 15-percent drop in total supplies in 2017/18.

Domestic Outlook

U.S. 2017/18 Rice Crop Forecast Lowered 1.1 Million Cwt to 178.6 Million Cwt

There were only minor revisions to the 2017/18 U.S. rice balance sheet this month, a result of a slight reduction in the crop forecast. The 2017/18 crop forecast was lowered 1.1 million cwt to 178.6 million cwt based on fractionally smaller harvested area and yield estimates reported by USDA's National Agricultural Statistics Service (NASS). The 2017/18 rice crop is 20 percent smaller than a year earlier and is the smallest since 1996/97.

At 2.39 million acres, U.S. harvested area in 2017/18 is just 4,000 acres below the previous forecast and 23 percent smaller than a year earlier. Harvested rice area in 2017/18 is the smallest since 1987/88. The average yield of 7,469 pounds per acre is 35 pounds below the previous forecast but 3 percent above a year earlier. By class, long-grain production in 2017/18 is projected at 126.3 million cwt, 0.8 million cwt below the previous forecast and 24 percent smaller than the 2016/17 crop. The 2017/18 U.S. medium-and short-grain crop is forecast at 52.3 million cwt, 0.3 million cwt below the previous forecast and 9 percent smaller than a year earlier.

The only area revision this month was a 4,000-acre reduction in the Texas estimate to 167,000 acres. Yield forecasts were lowered this month for California, Missouri, and Texas but raised slightly for Arkansas. These revisions resulted in crop forecast reductions of 5 percent for Texas, 2 percent for California, 1 percent for Missouri, and 1 percent for Arkansas.t

In 2017/18, U.S. rice harvested area declined 706,000 acres from 2016/17, with area smaller in all six reported States. Weak long-grain price outlook at planting and adverse weather in much of the Delta at peak planting accounted for much of the area decline. Arkansas accounted for 61 percent of the 2017/18 U.S. rice harvested area decline. Yields in 2017/18 are forecast higher than a year earlier in Arkansas, Louisiana, and Missouri; lower than last year in Texas and California; and virtually unchanged in Mississippi. At 7,350 pounds per acre, the Arkansas yield is 6 percent higher than a year earlier. Missouri's 2017/18 yield of 7,100 pounds per acre is 7 percent above a year earlier and the highest on record. Louisiana's 2017/18 yield of 7,000 pounds per acre is almost 6 percent above a year earlier. In contrast, the 2017/18 Texas yield is projected to decline almost 8 percent to 6,800 pounds per acre. The Texas rice-growing area received extremely heavy rainfall and severe flooding from Hurricane Harvey in late August, with the bulk of the first crop already harvested. California's 2017/18 yield of 8,600 pounds per acre is 240 pounds below a year earlier. Although crop conditions have been quite favorable in California since planting began, progress remains well behind normal in the State. At 7,200 pounds per acre, Mississippi's 2017/18 yield is just 20 pounds below a year earlier.

Production in 2017/18 is projected to be smaller than a year earlier in every reported State, with Arkansas accounting for 55 percent of the U.S. crop reduction. At 80.3 million cwt, the Arkansas 2017/18 rice crop is 24 percent smaller than a year earlier and the smallest since 2011/12. Mississippi's 2017/18 forecasted production of 8.5 million cwt is 39 percent below a year earlier and the smallest since 1984/85. Missouri's production forecast of 11.4 million cwt is 26 percent below a year earlier. On the Gulf Coast, Louisiana's 2017/18 rice crop forecast of 27.65 million tons is 3 percent smaller than a year earlier. Like the Delta, Louisiana experienced heavy rains and flooding at the end of April through early- and mid-May. The Texas rice crop is forecast at 11.4 million cwt, 18 percent smaller than a year earlier. Finally, California's 2017/18 rice production is projected to decline 17 percent to 39.4 million cwt.

For the week ending October, 85 percent of the U.S. rice crop was reported harvested, 3 percentage points behind last year's pace but ahead of the U.S. 5-year average of 80 percent. Harvesting was complete on the Gulf Coast. In the Delta, 94 percent of Arkansas' 2017/18 rice crop was reported harvested by October 9, nearly unchanged from a year earlier but ahead of the State's average of 86 percent. The Missouri rice crop was reported 79 percent harvested by October 9, well behind both last year's record pace of 90 percent but slightly ahead of the State's average of 76 percent. Mississippi's 2017/18 rice crop was reported 93 percent harvested by October 9, ahead of 89 percent last year and the State's 5-year average of 85 percent. In California, 40 percent of the 2017/18 crop was reported harvested by October 9, well behind 52 percent a year earlier and behind the State's 5-year average of 45 percent.

U.S. Rice Supplies in 2017/18 Projected To Be the Smallest Since 2003/04

Total U.S. rice supplies in 2017/18 are projected at 248.8 million cwt, down 1.1 million cwt from the previous forecast and 15 percent below a year earlier. These are the smallest U.S. supplies since 2003/04. The substantial decline in U.S. rice supplies in 2017/18 is primarily due to a smaller crop; beginning stocks are 1 percent lower and imports are projected 3 percent higher. By class, U.S. long-grain supplies are projected at 178.3 million cwt, 0.8 million cwt below last month's forecast and 15 percent smaller than a year earlier. Combined medium- and short-grain total supplies are projected at 67.0 million cwt, 0.3 million cwt below the September forecast and more than 17 percent below a year earlier and the smallest since 2008/09. The decline in medium- and short-grain supplies is due to a much smaller carryin and the smaller forecast crop.

At 46.0 million cwt, the 2017/18 U.S. all-rice beginning stocks estimate is 1 percent below a year earlier. Long-grain beginning stocks remain estimated at 31.0 million cwt, 37 percent above a year earlier and the highest since 2011/12. Combined medium- and short-grain beginning stocks remain estimated at 11.5 million cwt, 45 percent below a year earlier. U.S. imports in 2017/18 remain forecast at 24.2 million cwt, 3 percent larger than a year earlier. Long-grain imports remain projected at 21.0 million cwt, up almost 4 percent from a year earlier. Medium- and short-grain imports remain projected at 3.2 million cwt, nearly unchanged from a year earlier.

Both U.S. Exports and Domestic and Residual Use Are Projected Smaller in 2017/18

Total use of U.S. rice in 2017/18 remains projected at 221.0 million cwt, 11 percent below a year earlier. At 115.0 million cwt, the total domestic and residual use forecast for 2017/18 is 12.5 percent smaller than a year earlier. The year-to-year decline in domestic and residual use is also largely driven by projections for a smaller crop and by higher prices. Long-grain domestic and residual use remains projected at 88.0 million cwt, 12 percent below 2016/17. Medium- and short-grain domestic use remains projected at 27.0 million cwt, 15 percent below a year earlier and the lowest since 1988/89.

Total U.S. rice exports in 2017/18 remain projected at 106.0 million cwt, 9 percent below a year earlier. Rough-rice exports remain projected at 40.0 million cwt, 6 percent below a year earlier. Mexico, northern South America, Central America, and the eastern and southern Mediterranean are the major markets for U.S. rough-rice, with the Western Hemisphere markets taking almost exclusively long-grain. U.S. milled-rice exports (combined milled- and brown-rice exports on a rough basis) remain projected at 66.0 million cwt, 11 percent smaller than a year earlier. The expected decline in 2017/18 U.S. milled rice exports is based on smaller U.S. supplies, higher U.S. prices, and more global competition in several markets, particularly Sub-Saharan Africa and the Middle East. Northeast Asia, Haiti, the Middle East, and Canada are the major commercial markets for U.S. milled rice.

By class, long-grain exports remain projected at 75.0 million cwt, down 5 percent from a year earlier. The Western Hemisphere is the largest market for U.S. long-grain exports. The United States faces its strongest competition from Asian exporters in the Middle East and Sub-Saharan Africa, with South American exporters also now shipping to these regions. U.S. medium- and short-grain exports remain projected at 31.0 million cwt, 18 percent below the year-earlier near-record of 37.9 million cwt. The expected decline is based on smaller U.S. supplies, higher prices, and larger exports from Australia and China. Northeast Asia, primarily Japan, South Korea, and Taiwan, is again expected to be the largest market for U.S. medium- and short-grain rice, accounting for the bulk of U.S. exports in 2017/18. These purchases are all made as part of World Trade Organization (WTO) agreements. North Africa and the Middle East account for most of the remaining U.S. medium- and short-grain exports. Canada and Oceania purchase much smaller amounts. China, Egypt, and Australia are the major U.S. competitors in the global medium- and short-grain market. However, Egypt's rice exports continue to be constrained by its government export restrictions.

U.S. all-rice 2017/18 ending stocks are projected at 27.8 million cwt, down 1.1 million cwt from the previous forecast and almost 40 percent below a year earlier and the smallest since 2003/04. The ending stocks-to-use ratio is projected at 12.6 percent, down from 18.6 percent a year earlier and the lowest since 2003/04. Long-grain ending stocks are forecast at 15.3 million cwt, down 0.8 million cwt from the previous forecast and 51 percent below a year earlier. The long-grain stocks-to-use ratio is forecast at 9.4 percent, down from 17.4 percent a year earlier and the lowest since 2003/04. Medium- and short-grain ending stocks are forecast at 9.0 million cwt, down 0.3 million cwt from the previous forecast and 22 percent below a year earlier. These are the smallest medium- and short-grain stocks since 2008/09. The medium- and short-grain stocks-to-use ratio is forecast at 15.5 percent, down from 16.5 percent in 2016/17.

U.S. Season-Average Farm Prices Expected To Be Higher for Both Rice Classes in 2017/18

The forecasts for the U.S. season-average farm prices (SAFP) for 2017/18 for both classes and in both regions are unchanged this month. The 2017/18 U.S. long-grain season-average farm price remains projected at \$12.00-\$13.00 per cwt, well above \$9.62 in 2016/17. The California medium- and short-grain 2017/18 SAFP remains forecast at \$15.50-\$16.50, up from \$13.60 in 2016/17. The Southern medium- and short-grain 2017/18 SAFP remains forecast at \$12.20-\$13.20 per cwt, up from \$10.20 in 2016/17. The 2017/18 U.S. medium- and short-grain SAFP remains forecast at \$14.70-\$15.70 per cwt, well above \$12.80 in 2016/17. The 2017/18 all-rice SAFP is projected at \$12.70-\$13.70 per cwt, up 50 cents on both the high and low ends of the range from the previous forecast and higher than \$10.30 a year earlier.

In September, USDA reported a long-grain monthly average cash price for August of \$10.60 per cwt, up 61 cents from July and the highest since September and the third consecutive month of an increase. The California July medium- and short-grain cash price was reported at \$14.00 per cwt, up 10 cents from June and the highest since August 2016. The August southern medium- and short-grain price was reported at \$11.00 per cwt, up 30 cents from July and the highest since February 2016. The July U.S. medium- and short-grain price was reported at \$13.80 per cwt, up 50 cents from July. The all-rice July price was reported at \$11.10 per cwt, up 40 cents from July and the highest since August 2016.

International Outlook

Crop Forecasts for 2017/18 Raised for Egypt and Nigeria; Lowered for Bangladesh and Brazil

Global rice production in 2017/18 is forecast at 483.8 million tons (milled basis), up 0.4 million tons from the previous forecast but 3.3 million tons below the 2016/17 record. At a record 161.86 million hectares, global harvested area in 2017/18 is up 1.1 million hectares from a year earlier. The average global yield of 4.46 tons per hectare is down from the year-earlier record of 4.52 tons, mostly due to a 3-percent expansion in area by India, a low-yielding large producer.

This month, USDA raised its 2017/18 crop forecasts for four countries, all in Africa. The largest upward revision was for Nigeria, the largest rice-producing country in Sub-Saharan Africa. Nigeria's 2017/18 crop forecast was raised 0.9 million tons to 3.65 million tons due to a much larger area forecast. The crop size is unchanged from the year earlier record. At 3.2 million hectares, Nigeria's rice area is up 620,000 hectares from the previous forecast and unchanged from the year earlier record. This month, USDA revised Nigeria's area, yield, and productions estimates from 2012/13 to 2017/18 largely based on revised data from the United Nations Food and Agriculture Organization (FAO) indicating substantially larger area and production in each of those years. Since 2011/12, Nigeria's rice area has increased 41 percent, mainly due to government support programs and trade policies aimed at achieving self-sufficiency. In contrast to the substantial area expansion, yields have shown no growth over the past decade. Despite the strong production growth, Nigeria remains one of the world's largest rice importers, with imports accounting for more than 35 percent of domestic use.

Elsewhere in Sub-Saharan Africa, Ghana's 2017/18 rice production forecast was raised 129,000 tons to 519,000 tons due to larger area. Production is unchanged from the year-earlier record. At 285,000 hectares, harvested rice area in Ghana is up 5,000 hectares from a year earlier and up more than 150 percent from a decade earlier. The Government of Ghana is actively supporting expanded rice area with the timely distribution of subsidized inputs. Angola's 2017/18 rice crop forecast was increased 15,000 tons to a record 40,000 tons based on a higher area estimate. Angola's area and yield have increased sharply over the past decade. Finally, in North Africa, Egypt's 2017/18 rice production forecast was increased 0.3 million tons to 4.3 million tons based on a higher area estimate recommended by the U.S. Agricultural Office in Cairo. Despite this month's upward revisions, both area and yield remain below the year-earlier record. Egypt is an exporter of medium- and short-grain rice and the largest rice producer in Africa.

These 2017/18 upward crop revisions were partially offset by seven crop reductions—three in Asia and four in the Western Hemisphere. First, in Asia, Bangladesh's 2017/18 rice production forecast was lowered 0.5 million tons to 33.0 million tons based on a 0.2-million reduction in harvested area to 11.3 million hectares. The substantial area reduction is the result of excessive rainfall this spring and summer that adversely impacted the Aman crop and, to a lesser degree, the earlier harvested Aus crop. The Aman crop is planted in July-August and harvested in November-December and was impacted the most by the excessive rains. The Aman crop accounts for more than half of total rice area in Bangladesh and for almost 40 percent of Bangladesh's rice production. The much smaller Aus crop—planted March-April, harvested June-July—accounts for 5-6 percent of production. The Boro crop, harvested in April-May, accounts for more than half of Bangladesh's annual rice production and was impacted very little by the severe flooding. The Boro crop is fully irrigated and achieves the highest yields.

Second, Afghanistan's 2017/18 production forecast was lowered 78,000 tons to 325,000 tons largely based on data from FAO. Both area and yield forecasts were lowered for Afghanistan. The north and northeast experienced a delay in the onset of seasonal rains and have experienced prolonged dry periods. This is the third consecutive year of a decline in rice area and production in Afghanistan. Third, North Korea's 2017/18 rice crop forecast was lowered 50,000 tons to 1.55 million tons due to an extremely dry spring that stressed the crop and reduced the expected yield. Although area and production have partially recovered from the extremely low drought-reduced level of 2015/16, they both remain below levels achieved 5 years ago and well the record level achieved by North Korea in 1986/87 and the bumper crops of the 1980s.

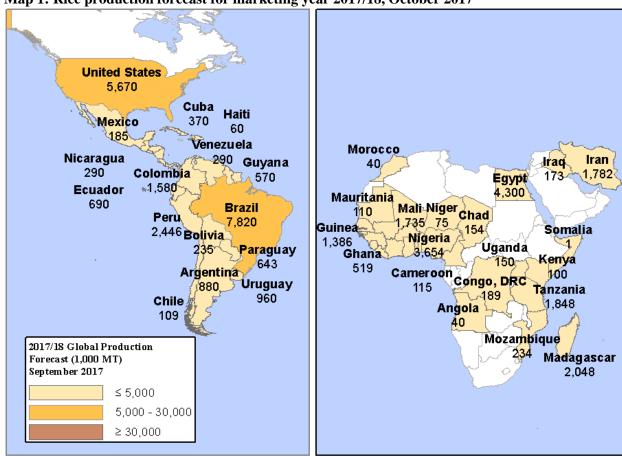

Three 2017/18 crop reductions were in South America. First, Brazil's 2017/18 production forecast was lowered 180,000 tons to 7.8 million tons based on a 0.1-million-hectare reduction in the area estimate to 2.0 million hectares recommended by the U.S. Agricultural Office in Brasilia. Rice harvested area in Brazil is still 1 percent above a year earlier, while the yield is forecast close to trend and well below the 2016/17 record high. Second, Guyana's 2017/18 crop forecast was lowered 22,000 tons to 570,000 tons based on data from the Guyana Rice Association indicating a larger-than-expected first crop but a smaller-than-expected second crop that was adversely impacted by high winds. Guyana's rice production and are expanded from 2009/10-2015/16 but currently remains well below the 2015/16 records.

Third, Venezuela's 2017/18 rice production forecast was lowered 0.2 million tons to 290,000 tons due to smaller area. The U.S. Agricultural Office in Caracas reported that the diesel shortage in early 2017 reduced plantings by limiting the use of tractors and water pumps resulting in hundreds of hectares being left idle or switched to other uses. Productivity was also reduced by shortages of fertilizer and seed, in addition to aging tractors and other equipment in urgent need of upgrades and repairs. In addition, there is minimal market incentive for farmers to increase planted area since farm-gate and retail prices are regulated by the government. Finally, the U.S. 2017/18 rice crop was lowered 37,000 tons to 5.67 million based on slightly smaller area and yield forecasts reported by the government. The U.S. crop is the smallest since 1996/97.

The 2016/17 global rice production estimate was raised 0.7 million tons to 487.1 million tons, up 14.6 million tons from a year earlier and the largest crop on record. There were six upward crop revisions for 2016/17—mostly in Sub-Saharan Africa—and four reductions. First, in Sub-Saharan Africa, Nigeria's 2016/17 production was raised 954,000 tons to a record 3.65 million tons based on a much higher area estimate. Second, Ghana's 2016/17 production was increased 123,000 tons to a record 519,000 tons, also due to larger area. Ghana's rice area and production have expanded sharply since 2009/10. Third, Benin's 2017/18 crop was increased 18,000 tons to a record 156,000 tons due to a higher yield. Both area and production have more than doubled in Benin over the past decade. Fourth, Angola's 2017/18 crop estimate was increased 13,000 tons to 38,000 tons due to expanded plantings. Fifth, Togo's 2016/17 rice crop was increased 8,000 tons to 88,000 tons, also due to expanded area. Despite increasing from 2015/16, rice area and production in Togo remain well below the 2012/13 records. Outside Sub-Saharan Africa, Pakistan's 2016/17 crop forecast was increased 50,000 tons to 6.85 million based on a higher yield.

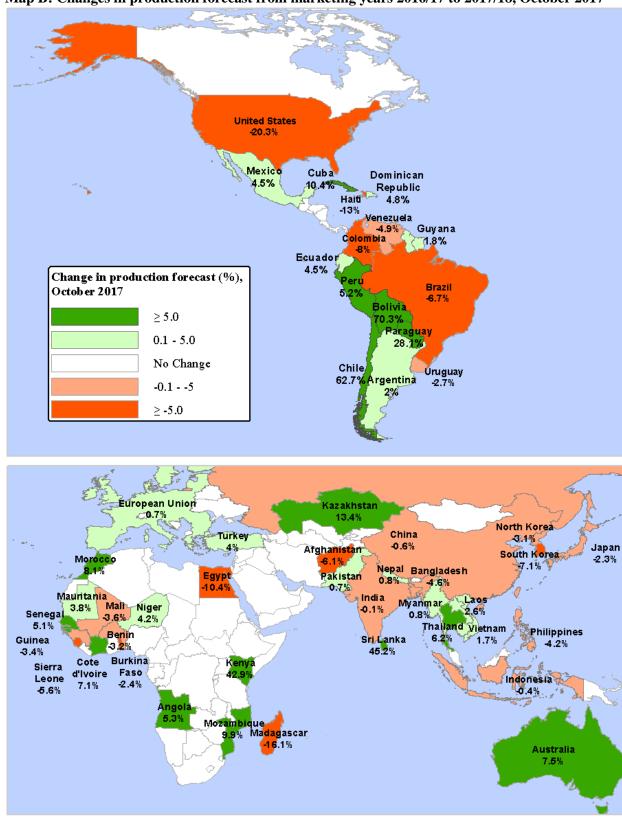

These upward revisions were partially offset by four reductions. First, Sri Lanka's 2016/17 production estimate was lowered 353,000 tons to 2.0 million tons based on a much lower area estimate for the Maha crop harvested in March-April, mostly due to severe drought in late 2016 and early 2017. The smaller Yala crop, harvested last November-December, was adversely impacted by flooding. Total rice production in Sri Lanka in 2016/17 was the smallest since 2003/04, and total area was the smallest since 1996/97. Like Bangladesh, Sri Lanka has been a steady buyer in the global market in an effort to make up for these crop shortfalls with larger imports. Second, also in South Asia, Afghanistan's 2016/17 crop was lowered 57,000 tons to 346,000 tons due to lower area.

Map 1: Rice production forecast for marketing year 2017/18, October 2017

Source: U.S. Dept. of Agriculture, Foreign Agricultural Service, Production, Supply and Distribution data base

Map B: Changes in production forecast from marketing years 2016/17 to 2017/18, October 2017

Source: U.S. Dept. of Agriculture, Foreign Agricultural Service, Production, Supply and Distribution data base

Outside Asia, Australia's 2016/17 rice crop was lowered 15,000 tons to 586,000 tons based on a lower yield reported by the government. The weather has been very dry in New South Wales, similar to the severe drought that reduced Australia's crops in 2002 and 2006. Finally, Mexico's 2016/17 crop estimate was lowered 4,000 tons to 177,000 tons based on a smaller area estimate reported by the government.

China Revisions Boost Global Ending Stocks Forecast 15 Percent to 141.5 Million Tons

Global rice consumption in 2017/18 is projected at 480.5 million tons, up 0.3 million tons from the previous forecast but 0.5 million tons below the year-earlier record. This month, 2017/18 consumption forecasts were raised for Nigeria, Egypt, and Mozambique but lowered for China, Bangladesh, Burma, North Korea, and Sri Lanka. Nigeria's 2017/18 consumption forecast was raised 1.3 million tons to a record 6.2 million tons due to a much larger crop. In contrast, China's 2017/18 consumption forecast was lowered 650,000 tons to 142.35 million tons based on a revision to annual consumption starting in 2010/11 that lowered estimates each year, resulting in a small decline in per capita use over the 7-year period. The smaller consumption estimates were the result of upward revisions in ending stocks from 2010/11-2017/18 that were based on mounting evidence that China was holding more stocks than previously estimated and that per capita rice use, especially food use, was slowly declining with higher incomes and more urbanization. For more information on these revisions, see page 11 of the October *Grain World Markets and Trade* Report on the USDA, Foreign Agricultural Service website.

With rice production exceeding consumption in 2017/18, ending stocks are projected to increase 3 percent to 141.5 million tons, up 18.0 million tons from the previous forecast and the highest since 2000/01. China accounted for the bulk of the upward revision in global ending stocks. China's 2017/18 ending stocks were revised up 17.6 million tons to 92.5 million tons, up 6.0 million from 2016/17 and the highest since 2000/01. Nigeria's 2017/18 ending stocks forecast was raised 0.6 million tons to 1.1 million tons due to a larger crop. In contrast, 2017/18 ending stocks forecasts were lowered this month for Bangladesh, Brazil, the Philippines, and the United States. On a year-to-year basis, China accounts for most of the increase in global ending stocks and accounts for 65 percent of global ending stocks. The global stocks-to-use ratio is projected at 29.4 percent, up from 28.7 percent a year earlier.

Weaker Crop Boosts Bangladesh's 2018 Import Forecast to 1.2 Million Tons

Global rice trade for 2018 is projected at a near-record 44.4 million tons, nearly unchanged from the previous forecast and just 0.14 million tons below the year-earlier record. In 2018, increased shipments from Australia, China, India, and Pakistan are projected to more than offset smaller shipments from Argentina, Burma, Cambodia, Thailand, and the United States. Among importers, larger purchases by Bangladesh, Cote d'Ivoire, Cuba, Ghana, EU, Iraq, Madagascar, the Philippines, Saudi Arabia, Senegal, Sierra Leone, and the United Arab Emirates are projected to more than offset reduced imports by Egypt, the Dominican Republic, Iran, Laos, Nigeria, and South Africa, and Sri Lanka.

Global rice trade in 2017 is projected at 44.6 million tons, virtually unchanged from a month earlier but 11 percent larger than a year earlier. The substantial year-to-year increase in exports is largely due to increased shipments from Burma, Cambodia, China, India, Thailand, the United States, and Vietnam. In 2017, global imports are being boosted by substantially larger purchases by Bangladesh, China, Iran, Madagascar, Nigeria, the Philippines, Saudi Arabia, and Sri Lanka.

Table A - Rice t	trade at a gla	ance for 2017	and 20	018 (1,000 MT), (Octob	per 2017
Country or	Trade	Month-to-n		Year-to-yea	ır	Comments on month-to-month forecast changes
region		forecast ch	ange	forecast chan	ige	Comments on month-to-month forecast changes
Thousand met	ric tons					
Rice Exports, 2	.018	T				
Brazil	650	-50	1	0	÷	Decreased production.
Burma	2100	100	1	-300	4	Continued strong sales to China.
Guyana	450	-50	1	20	1	Decreased production.
Venezuela	30	-10	1	-10	1	Decreased production and imports.
Rice Exports, 2	.017					
Guyana	430	-20	1	-30	1	Decreased production.
Laos	50	-25	1	-25	1	Reduced regional trade.
Mexico	90	35	1	88	1	Sale to Venezuela.
South Africa	120	10	•	-25	1	Increased on pace of trade.
Tanazania	40	10	•	10	1	Increased production.
Venezuela	40	-10	1	-60	1	Decreased production and imports.
Rice Imports, 2	2018					
Bangladesh	1200	200	1	100	1	
Ghana	550	-125	1	50	1	Increased production
North Korea	80	30	•	-10	1	Stronger imports from China.
Mozambique	675	50	1	25	1	Strong imports to-date and consumption growth.
Nigeria	2300	200	1	-100	_	Strong import pace.
Philippines	1700	-100	1	600	1	Import policy changes.
Somalia	440	50	1	20	1	Strong imports to-date and consumption growth.
Togo	170	20	1	20	1	Raised on growth trends.
Venezuela	390	-10	1	10	1	Lack of foreign exchange.
Rice Imports, 2	2017					
Algeria	130	10	1	10	1	Increased on final data.
Brazil	640	40	1	-131	1	
Ghana	500	-150	1	-200	Ţ	Increased production.
Guinea	725	50	1	75	1	Increased on pace of trade.
Kenya	550	50	1	50	1	·
North Korea	90	10	1	40	1	Stronger imports from China.
Laos	150	-50	1	-78	<u>Ī</u>	Fewer imports from Thailand.
Liberia	270	20	1	70	1	•
Mexico	820	20	1	89	1	Increased on pace of trade.
Mozambique	650	50	1	25		Strong imports to-date and consumption growth.
Nigeria	2400	200	1	300		Strong import pace.
Philippines	1100	500	1	300	1	Import policy changes.
Sierra Leone	300	20	1	100	1	
Somalia	420	50	1	70	_	Strong imports to-date and consumption growth.
South Africa	1000	75	1	46	1	Pace of trade.
Tanzania	220	20	1	20	<u>-</u>	Steady basmati imports.

Thailand's Price Quotes Drop Slightly, U.S. Price Quotes Continue to Increase

Prices for most grades of Thailand's regular-milled white rice declined slightly over the past month, as buyers are waiting for the harvest of the main 2017/18 rice crop to start. Prices for Thailand's 100-percent Grade B milled white rice were quoted at \$406 per ton for the week ending October 9, down \$4 from the week ending September 12. Prices for Thailand's parboiled 5-percent brokens—a specialty rice—were quoted at \$410 per ton for the week ending October 9, down \$3 from the week ending September 12. Thailand's premium jasmine rice (also a specialty rice) was quoted at \$925 per ton for the week ending October 9, up 11.5 percent from the week ending September 12. All price quotes for Thailand's rice are from the *Weekly Rice Price Update* reported by the U.S. Agricultural Office in Bangkok.

Price quotes for Vietnam's high-quality 5-percent-broken kernels were reported at \$387 per ton for the week ending October 10, down \$8 from the week ending September 13. Lack of new demand and strong competition from other sellers in the region are behind the price drop. Vietnam's prices are currently just \$4-\$5 below prices for similar qualities of Thailand's rice. Vietnam's rice typically sells at prices \$20-\$40 per ton below prices for comparable grades of Thailand's rice.

In contrast, U.S. prices for long-grain milled rice rose over the past month, likely a response to expected tighter U.S. supplies in 2017/18. For the week ending October 10, prices for high-quality U.S. Southern long-grain rice (No. 2, 4-percent brokens, bagged, free on board (fob) vessel, U.S. Gulfport) were quoted at \$560 per ton, up \$10 from the week ending September 13 and the highest since November 2015. The U.S. price difference over Thailand's 100-percent Grade B milled rice was \$154 per ton, up from \$140 for the week ending September 13 and the highest since December 2015. Prices for U.S. long-grain rough-rice (bulk, fob vessel, New Orleans) were quoted at \$316 per ton for the week ending October 9, up \$11 from the week ending September 13 and the highest since October 2015.

Price quotes for California medium-grain milled rice (No. 1, 4-percent brokens, sacked, free on board, domestic mill) also increased over the past month. For the week ending October 10 prices were quoted at \$795 per ton, up \$45 from the week ending September 13 and the highest since December 2015. Export prices for California medium-grain milled-rice (4-percent brokens, sacked, on board vessel in Oakland) were quoted at \$845 per ton for the week ending October 10, up \$25 from the week ending September 13. Price quotes for Vietnam, U.S. long- and medium-grain milled-rice, and U.S. rough-rice export prices are from the weekly *Creed Rice Market Report*.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and, where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

E mail Notification

Readers of ERS outlook reports have two ways they can receive an e-mail notice about release of reports and associated data.

- Receive timely notification (soon after the report is posted on the web) via USDA's Economics, Statistics and Market Information System (which is housed at Cornell University's Mann Library). Go to http://usda.mannlib.cornell.edu/MannUsda/aboutEmailService.do and follow the instructions to receive e-mail notices about ERS, Agricultural Marketing Service, National Agricultural Statistics Service, and World Agricultural Outlook Board products.
- Receive weekly notification (on Friday afternoon) via the ERS website. Go to http://www.ers.usda.gov/subscrib e-to-ers-e-newsletters.aspx and follow the instructions to receive notices about ERS Outlook reports, Amber Waves magazine, and other reports and data products on specific topics. ERS also offers RSS (really simple syndication) feeds for all ERS products. Go to http://www.ers.usda.gov/rss/ to get started.

^{-- =} Not available. 1/ Stock totals by type omit brokens, which are included in total stocks for all types of rice in table 1. 2/ Projected. 3/ Includes residual. 4/ Market year begins August 1. 5/ Accounts for the difference in beginning and ending stocks of brokens.

 $Thus, total \ supply \ of \ medium/short-grain \ may \ not \ equal \ the \ sum \ of \ beginning \ stocks, \ production, \ and \ imports.$

^{6/} The medium/short-grain season-average farm price (SAFP) largely reflects rice that is marketed through price pools in California. The pool price is not final until all the rice in the pool is marketed for the crop year.

Therefore, SAFP forecasts based on the average of NASS monthly prices and the final price may differ.

^{7/} Market year begins October 1.
